

Plan Your Story & Create with AI

From Idea to Images! 🎨 ✨

In this session, you'll plan your complete AI story, then learn to create images with AI to bring your vision to life!

 **Final Product:** A short YouTube video (16:9 widescreen format)

Learning Objectives

By the end of this class, you will be able to:

Skill	What You'll Learn
 Break a story into scenes	Every story can be divided into visual moments. This skill helps you organize complex ideas.
 Describe characters consistently	Define clear details (appearance, personality) so AI creates matching images across scenes.
 Turn ideas into structured AI prompts	Learn the "prompt recipe" to communicate effectively with AI tools.
 Understand why planning improves AI results	See how preparation leads to better, faster, more consistent AI outputs.

REQUIRED: What You Must Complete Today

By the end of Class 2, you **MUST** have these ready:

| # | Deliverable | Description | Check | |---|-----|-----|-----| | 1 | **Completed Story Outline** | Beginning, Middle, End filled in | ☐ | | 2 | **Scene Planning Table** | 3-5 scenes with WHO, WHERE, WHAT, MOOD | ☐ | |  **3-5 AI-Generated Images** | One image per scene, saved as PNG | |  **3-5 Video Clips (8 sec each)** | Short motion clips from Veo 3.1 |

 **Your files should be saved in:**

```
my_ai_story/
├── images/
│   ├── scene_1.png
│   ├── scene_2.png
│   └── scene_3.png
```

```
└─ (scene_4.png, scene_5.png if needed)
└─ (optional: music/)
```

⚠️ **You are NOT done until you have all 3 deliverables checked off!**

Why Planning Matters for AI

AI does better when YOU are clear.

Think of AI like a very talented artist who can't read your mind. The clearer your instructions, the better the results!

Without Planning	With Planning
❌ Random, inconsistent images	✅ Images that match your vision
❌ Character looks different each time	✅ Same character across all scenes
❌ Wasted time regenerating	✅ Get it right faster
❌ Frustration and confusion	✅ Smooth, fun creation process

A good story plan helps AI:

- 🎯 **Stay consistent** — Your robot looks the same in Scene 1 and Scene 5
- 🎲 **Avoid random results** — You get what you asked for, not surprises
- ✨ **Create better images** — More detail = more accuracy
- 🕒 **Save your time** — Less trial and error

💡 **Remember:** This isn't just art class—you're learning to **direct AI** like a movie director directs actors!

Session Overview

Total Time: 2 hours **Break Time:** 10 minutes **Active Learning:** ~1 hour 50 minutes

Suggested Schedule:

Time	Activity	Duration
00:00-00:05	Welcome & Review Class 1	5 min
00:05-00:30	Story Planning & Storyboarding	25 min
00:30-00:50	Learn AI Image Creation	20 min
00:50-01:00	BREAK ☕	10 min

Time	Activity	Duration
01:00-01:45	Create Images for Your Story	45 min
01:45-01:55	Save & Prepare for Class 3	10 min
01:55-02:00	Wrap-up & Preview Class 3	5 min

What You'll Create Today

By the end of this class, you will have:

-  A complete AI story plan (beginning, middle, end)
-  A detailed storyboard (3-5 scenes)
-  3-5 AI-generated images for YOUR story
-  All images organized and ready for Class 3
-  (BONUS) AI-generated background music (optional)

Table of Contents

1. [Plan Your Story](#)
2. [Create Your Storyboard](#) ← Scene descriptions
3. [Learn AI Prompts](#) ← Image & Video prompts
4. [Create Images & Video Clips](#) ← Tools + generation
5. [BONUS: AI Music Generation](#)
6. [Preview: What's Next](#)

PART 1: Plan Your Story {#planning}

Your Story Vision

Before we learn the AI tools, let's plan what story YOU want to tell!

Remember: Your story will be 1-2 minutes long when complete.

AI Reminder: The time you spend planning NOW saves time later!
Every detail you decide here helps AI create exactly what you imagine.

Step 1: Choose Your Path

How do you want to start?

Option	Best For	What You Get
A Use a Story Template	First-timers, or if you want structure	Pre-made story outline to customize
B Create Your Own Story	Experienced creators with a clear idea	Complete creative freedom

My choice: ☐ Option A (Template) or ☐ Option B (My Own)

A OPTION A: Story Templates (Recommended for Beginners!)

Pick ONE template and customize it with your own details:

Template 1: 🤖 "Lost Robot Finds a Friend"

The Story:

A small robot gets separated from its family and wanders into an unfamiliar place. It meets a kind character who helps it find its way home. Along the way, they face a challenge together and become best friends.

Scene	What Happens	Your Customization
Scene 1	Robot is lost in [PLACE]	Where? (forest, city, space station...)
Scene 2	Robot meets [CHARACTER]	Who helps? (kid, animal, alien...)
Scene 3	They face [CHALLENGE]	What problem? (storm, puzzle, monster...)
Scene 4	They solve it together!	How do they work together?
Scene 5	Robot finds home + new friend	Happy ending!

👉 My customizations:

Template 2: 🦊 "Animal with a Secret Power"

The Story:

An ordinary-looking animal discovers it has an amazing hidden ability. At first, the animal is scared or confused. But when someone needs help, the animal uses its power to save the day!

Scene	What Happens	Your Customization
Scene 1	[ANIMAL] living normal life	Which animal? Where?

Scene	What Happens	Your Customization
Scene 2	Discovers [SECRET POWER]!	What power? (glowing, flying, talking...)
Scene 3	Someone needs help!	Who? What's wrong?
Scene 4	Uses power to help	How does the power save the day?
Scene 5	Celebrated as a hero	Happy ending!

👉 **My customizations:**

Template 3: 🕒 "Time Traveler in the Future"

The Story:

A kid accidentally travels to the future and sees amazing technology everywhere. They explore with an AI guide, learn something important, and find a way back home with a new appreciation for technology.

Scene	What Happens	Your Customization
Scene 1	Kid finds [TIME MACHINE]	What triggers time travel?
Scene 2	Arrives in future, meets [AI GUIDE]	What does the future look like?
Scene 3	Explores [AMAZING THING]	Flying cars? Robot pets? Floating cities?
Scene 4	Learns [IMPORTANT LESSON]	What do they realize?
Scene 5	Returns home, changed	How are they different now?

👉 **My customizations:**

Which template did you choose? ☐ Template 1 ☐ Template 2 ☐ Template 3

💡 **Tip:** You can mix templates! Take the robot from Template 1 and give it a secret power from Template 2!

B OPTION B: Create Your Own Story

For students who have their own idea!

Story Theme Ideas (for inspiration):

- 🌟 "A Day with My AI Helper"
- 🚀 "Space Adventure with AI Friend"
- 🎨 "The Art That Came to Life"
- 🏫 "AI Helps Me at School"

- 🧑 "My AI Superhero Partner"
- 🎮 "Inside an AI Video Game"
- [Your own creative idea!]

My Story Theme:

Step 2: Story Outline (Beginning, Middle, End)

Whether you used a template or created your own, fill this out:

Every great story has three parts!

Beginning (Introduction) - ~20 seconds

Answer these:

- Who is the main character?
 - Where does it take place?
 - What's the situation or goal?
-

Middle (Adventure/Action) - ~40 seconds

Answer these:

- What happens?
 - What challenge or problem appears?
 - How does AI or your character help?
-

End (Resolution) - ~20 seconds

Answer these:

- How does it end?
 - Is the problem solved?
 - What did the character learn?
-

💡 Use ChatGPT to Help!

Stuck on your story? Get AI help!

👉 [Open ChatGPT](#)

Try these prompts:

1. Story Outline Help:

"I want to create a short story about [your theme]. Help me create a beginning, middle, and end with 3-5 scenes. Keep it simple and fun for kids!"

2. Character Development:

"Create a character description for my story: a [type] character who [what they do]. Include personality, appearance, and special abilities."

3. Story Improvement:

What ChatGPT suggested:

PART 2: Create Your Storyboard 🎨 {#storyboard}

What is a Storyboard?

A **storyboard** is like a comic strip that shows your story scene by scene!

Professional filmmakers use storyboards to plan every shot. You'll do the same!

⚠️ **Important:** Scene descriptions are NOT final AI prompts. You will convert them into prompts in Part 3.

Why We Do This (Important!)

WHY PLANNING MATTERS FOR AI

AI doesn't think like humans.
It follows patterns in text.

Clear planning = better, more controllable results.

You're not just learning storytelling—
you're learning how AI BEHAVES.

RULE: Maximum 3-5 Scenes (Non-Negotiable!)

Scenes	Verdict
3 scenes	✅ Perfect for beginners
4 scenes	✅ Great balance
5 scenes	✅ Maximum allowed
6+ scenes	❌ TOO MANY - simplify!

⚠️ **Hard Rule:** If you have more than 5 scene ideas, **save them for your next story!**

📌 **Why this matters for AI:** Fewer scenes = fewer images to generate = more time to perfect each one. AI works best when you focus on quality, not quantity.

Character Consistency

Your character must look the same in every scene!

👉 **See Part 3** for the full "Prompt Memory Pack" system that keeps your character consistent.

For now: Write a clear character description that you can reuse.

My Main Character Description:

[Type] named [Name], [size], [color], [key features],
[expression]

GOLD STANDARD EXAMPLE

Complete Finished Example: "Spark the Lost Robot"

This is a **COMPLETE, FINISHED** example. Your work should look **EXACTLY** like this!

Scroll through this entire example before starting your own work.

Story Idea

My Story Concept:

A small robot named Spark gets lost in a storm and finds a new friend who helps it get home.

📌 **Why this matters for AI:** A simple, clear idea keeps AI outputs focused and consistent. Complex plots with many twists confuse AI and produce unpredictable results.

2 Story Outline

Part	What Happens
Beginning	Spark the robot gets separated from its family during a storm
Middle	Spark meets Luna, a kind girl who helps search for Spark's home
End	They find Spark's family, and Spark and Luna become friends forever

📌 **Why this matters for AI:** Three clear acts (beginning, middle, end) help you create prompts that tell a coherent visual story. AI doesn't understand story—it just creates images. YOU connect them.

3 Main Character Definition

Character Name: Spark

Character Description (COPY THIS INTO EVERY PROMPT):

A small blue robot named Spark, with big round glowing yellow eyes,
a cute smile, one silver antenna on top, shiny metallic body,
about the size of a cat, cartoon style, friendly expression

📌 **Why this matters for AI:** AI does NOT "remember" characters. It has no memory between prompts. Repeating this EXACT description in every scene is the ONLY way to make Spark look the same in every image.

4 Scene Planning Table

Scene #	Scene Name	WHO	WHERE	WHAT Happens	MOOD
1	Lost in the Storm	Spark (robot)	Dark forest, rainy night	Spark wanders alone, looking scared	Sad, lonely

Scene #	Scene Name	WHO	WHERE	WHAT Happens	MOOD
2	A Friendly Face	Spark + Luna (girl with red raincoat)	Forest path	Luna finds Spark, offers help	Hopeful, warm
3	Home at Last	Spark + Luna + Robot family	Robot village	Spark reunites with family	Happy, joyful

 **Why this matters for AI:** This table is your "control panel." Each row = one image. By filling WHO/WHERE/WHAT/MOOD consistently, every scene will have the same structure, making your story visually coherent.

5 Final Scene Descriptions (Ready for Part 3!)

Scene 1: Lost in the Storm

Question	Answer
 WHO	Spark (small blue robot)
 WHERE	Dark forest at night, rain falling
 WHAT	Spark stands alone, looking around with scared eyes
 MOOD	Sad, lonely, a little scary

Scene Description:

A small blue robot named Spark, with big round glowing yellow eyes,
a cute smile, one silver antenna on top, shiny metallic body,
about the size of a cat, cartoon style, friendly expression.

Spark is standing alone in a dark forest at night. Rain is falling.
Tall dark trees surround the robot. Spark looks scared and confused,
with big sad eyes looking up at the sky.

Moody lighting, blue and purple tones, raindrops visible,
children's book illustration style.

Narration: "One stormy night, little Spark got lost in the big dark forest. The rain fell hard, and Spark didn't know which way to go."

Duration: 20 seconds

 **Why this prompt works for AI:**

- Character description is first (AI pays most attention to the beginning)
- Setting is specific (dark forest, night, rain)
- Mood words included (scared, confused, sad)
- Art style specified (cartoon, children's book illustration)

Scene 2: A Friendly Face

Question	Answer
 WHO	Spark + Luna (girl with red raincoat, brown hair, kind smile)
 WHERE	Forest path, rain stopping, sun peeking through
 WHAT	Luna kneels down and reaches out to Spark
 MOOD	Hopeful, warm, friendly

Scene Description:

A small blue robot named Spark, with big round glowing yellow eyes, a cute smile, one silver antenna on top, shiny metallic body, about the size of a cat, cartoon style, friendly expression.

A kind young girl named Luna wearing a bright red raincoat, with brown hair in pigtails, is kneeling down on a forest path reaching her hand out to Spark.

The rain is stopping, golden sunlight breaking through the clouds.
Spark looks up at Luna with hopeful eyes.

Warm lighting, green forest background, children's book illustration style.

Narration: "Then Luna found Spark hiding under a big leaf. 'Don't worry,' she said with a smile. 'I'll help you find your way home!'"

Duration: 25 seconds

Why this prompt works for AI:

- Same Spark description (consistency!)
- New character Luna is also described in detail
- Mood shifted from sad to hopeful (lighting words changed)
- Same art style maintained

Scene 3: Home at Last

Question	Answer
 WHO	Spark, Luna, Spark's robot family (3 robots of different sizes)
 WHERE	Cozy robot village with colorful dome houses
 WHAT	Spark hugs family, Luna waves goodbye
 MOOD	Happy, joyful, heartwarming

Scene Description:

A small blue robot named Spark, with big round glowing yellow eyes, a cute smile, one silver antenna on top, shiny metallic body, about the size of a cat, cartoon style, friendly expression.

Spark is hugging a larger blue robot (mother) and a medium blue robot (sibling) in a colorful robot village with dome-shaped houses in the background.

Luna, a young girl in a red raincoat with brown pigtails, waves goodbye with a big smile.

Sunny day, bright cheerful colors, rainbow in the sky, children's book illustration style, happy ending feeling.

Narration: "Together, they found Spark's family! Spark was so happy. 'Thank you, Luna!' beeped Spark. They promised to be friends forever. The End."

Duration: 25 seconds

Why this prompt works for AI:

- Same Spark description (third time!)
- Same Luna description (consistency for her too)
- Robot family described as "larger" and "medium" blue robots (same style)
- Mood is now bright and happy (lighting and colors match)

6 Story Summary

Item	Value
Story Title	Spark the Lost Robot
Total Scenes	3

Item	Value
Total Duration	70 seconds 

Why This Example Works Well for AI

META-LESSON: WHAT MAKES THIS EXAMPLE AI-FRIENDLY

1. CHARACTER DESCRIPTION IS REUSED

→ Spark looks the same in all 3 images

2. EACH SCENE IS CLEAR AND FOCUSED

→ One location, one action, one mood per scene

3. NO EXTRA DETAILS CONFUSE THE MODEL

→ We don't describe 50 trees or 12 raindrops

4. ART STYLE IS CONSISTENT

→ "children's book illustration style" in every scene

5. MOOD WORDS MATCH THE SCENE

→ Sad scene = "moody, blue tones"

→ Happy scene = "bright, cheerful, rainbow"

This isn't just a story—it's a set of AI INSTRUCTIONS.

NOW IT'S YOUR TURN!

Scene Guidelines

What Makes ONE Scene?

A scene is **ONE moment** in your story. Think of it as ONE picture.

Each scene should answer these 4 questions:

Question	What to Write	Example
 WHO is there?	Main character(s) in this moment	"Spark and Luna"
 WHERE are they?	The setting/location	"In a dark forest at night"
 WHAT is happening?	The action or event	"They discover a glowing cave"
 MOOD / emotion?	How it feels	"Mysterious and exciting"

How Detailed is "Enough"?

✅ **GOOD:** 2-4 sentences with specific visual details

❌ **TOO VAGUE:** "A robot in a forest"

❌ **TOO COMPLEX:** "A robot with 47 buttons, 12 antennas, holographic displays..."

YOUR Story: Main Character Definition

Write your character description **ONCE** here. Copy-paste it into every scene!

My Character Name: _____

My Character Description (COPY THIS TO EVERY PROMPT):

[Size] [Color] [Type of character], with [key features],
[expression], [art style]

Example: "A small blue robot with big round eyes, a friendly smile,
one antenna on top, shiny metal body, cartoon style"

 **Why this matters for AI:** This is your "character recipe." Copy-paste it into EVERY prompt to keep your character consistent.

YOUR Scene Planning Table

Fill this out for YOUR story (remember: 3-5 scenes maximum!):

Scene #	Scene Name	WHO	WHERE	WHAT Happens	MOOD
1					
2					
3					
4 (optional)					
5 (optional)					

YOUR Detailed Scene Prompts

Follow the Gold Standard example format!

Scene 1: _____

Question	Your Answer
 WHO	
 WHERE	
 WHAT	
 MOOD	

Scene Description:

[Describe: WHO is here, WHERE they are, WHAT is happening, MOOD]

Narration:

[1-2 sentences]

Duration: ____ seconds

Scene 2: _____

Question	Your Answer
----------	-------------

 WHO	
---	--

 WHERE	
---	--

 WHAT	
--	--

 MOOD	
--	--

Scene Description:

[WHO + WHERE + WHAT + MOOD]

Narration:

[1–2 sentences]

Duration: ____ seconds

Scene 3: _____

Question	Your Answer
----------	-------------

 WHO	
---	--

 WHERE	
---	--

 WHAT	
--	--

 MOOD	
--	--

Scene Description:

[WHO + WHERE + WHAT + MOOD]

Narration:

[1–2 sentences]

Duration: ____ seconds

Scene 4 (Optional): _____

Question	Your Answer
----------	-------------

 WHO	
---	--

 WHERE	
---	--

 WHAT	
--	--

 MOOD	
--	--

Scene Description:

[WHO + WHERE + WHAT + MOOD]

Narration:

[1-2 sentences]

Duration: ____ seconds**Scene 5 (Optional):** _____

Question	Your Answer
----------	-------------

 WHO	
---	--

 WHERE	
---	--

 WHAT	
--	--

 MOOD	
--	--

Scene Description:

[WHO + WHERE + WHAT + MOOD]

Narration:

[1-2 sentences]

Duration: ____ seconds**YOUR Story Summary****Story Title:** _____**Total Scenes:** ____ (must be 3-5!)

Total Duration: ____ seconds (aim for 60-120 seconds)

Need Help Breaking Down Your Story into Scenes?

Struggling to create your scene descriptions?

 **Use our ChatGPT Scene Generator:**

`Class_2_ChatGPT_Scene_Generator_Prompts.md`

This template will help you:

-  Break your story into 3-5 scenes automatically
-  Get WHO, WHERE, WHAT, MOOD for each scene
-  Receive duration recommendations (15-30 sec per scene)
-  Refine scenes until they're perfect
-  Transfer directly to your worksheet

Two templates available:

- Option A: For students using story templates (Lost Robot, Animal Power, Time Traveler)
- Option B: For students creating their own custom story

 **Ask your teacher** if you can use this tool, or plan scenes yourself!

What's Next?

You've completed your scene descriptions!

 **Next:** In Part 3, you'll learn how to turn these scene descriptions into AI prompts—without rewriting everything from scratch.

Storyboard Checklist

Before moving to image creation, check:

Check	Requirement
☐	I have 3-5 scenes (NOT more!)
☐	I wrote my character description ONCE
☐	I wrote a clear character description I can reuse
☐	Each scene has WHO, WHERE, WHAT, MOOD

Check	Requirement
☐	Narration is written for each scene
☐	Story flows: Beginning → Middle → End
☐	Total time is 1-2 minutes

✨ Great! Now let's create the images for your story!

PART 3: Learn AI Prompts 🧠 {#learn-images}

🎬 Big Picture: The Pro Workflow

Before we dive into prompts, understand how professionals create AI videos:

PRO WORKFLOW: FROM STORY TO VIDEO

Layer 1: SCENE DESCRIPTIONS (Part 2) ✅ Done!

└─ WHO, WHERE, WHAT, MOOD

↓

Layer 2: AI PROMPTS (Part 3) ← You are here!

└─ Translate scenes into AI instructions

↓

Layer 3: IMAGE + VIDEO GENERATION (Part 4)

└─ Create images AND short video clips

↓

Layer 4: FINAL ASSEMBLY (Class 3)

└─ Combine clips, add voice, music

Your progress:

Layer	Status
Scene Descriptions	✔ Complete (Part 2)
AI Prompts	📌 Learning now
Image + Video Clips	⌚ Next (Part 4)
Final Assembly	⌚ Class 3

🎯 Scene Description vs. AI Prompt

You have scene descriptions from Part 2. Why do we need prompts?

	Scene Description (Part 2)	AI Prompt (Part 3)
Purpose	Planning YOUR ideas	Instructing the AI
Audience	You (the creator)	The AI tool
Length	Short notes	Detailed instructions
Format	WHO, WHERE, WHAT, MOOD	Full sentences with style keywords

Think of it this way:

Scene Description = Your director notes (shorthand)
AI Prompt = Script for the AI artist (detailed)

📌 **Key Insight:** AI cannot read your mind! You must translate your scene notes into clear, detailed instructions.

🖼️ vs 🎬 Text-to-Image vs Text-to-Video Prompts

Important: Different AI tools need different types of prompts!

Two Approaches for Your Video Project:

Approach	How It Works	Tools	Best For
Image → Video	Create still images, then animate	Gemini/DALL-E + Runway	More control, consistent characters

Approach	How It Works	Tools	Best For
Direct Video	Generate video clips directly	Veo, Kling, Pika	Faster, but less control

This class: Create images AND short video clips using Veo 3.1!

Text-to-Image Prompts (Part 4)

Focus: What does the scene LOOK LIKE? (Static)

Structure:

[Character description] + [Pose/expression] + [Setting] + [Mood] + [Style]

Example:

A small blue robot with glowing yellow eyes, standing alone looking scared, in a dark forest at night with rain falling, sad lonely atmosphere, children's book illustration style, 16:9 aspect ratio.

Key elements:

- Character appearance
 - Static pose/expression
 - Environment details
 - Lighting and mood
 - Art style
 - Aspect ratio (16:9 for YouTube)
-

Text-to-Video Prompts (Class 3 / Advanced)

Focus: What HAPPENS in the scene? (Motion)

Structure:

[Character description] + [ACTION/movement] + [Camera movement] + [Setting] + [Duration hint]

Example:

A small blue robot with glowing yellow eyes slowly walks through a dark forest, looking around nervously.

Camera follows from behind, slight zoom in.
Rain falling, moody blue lighting,
children's animation style.

Key elements (different from images!):

- **Action verbs:** walks, runs, looks, turns, reaches
- **Movement speed:** slowly, quickly, suddenly
- **Camera movement:** camera follows, zooms in, pans left
- **Duration hints:** over 4 seconds, brief moment

Comparison Table

Element	Image Prompt	Video Prompt
Verb tense	Standing, looking	Walks, looks around
Camera	Not needed	"Camera pans", "zooms in"
Motion	Static pose	Action description
Timing	Not needed	"slowly", "over 4 seconds"
Aspect ratio	16:9	Usually built-in

 **For this class:** You'll use ONE prompt to generate BOTH images and videos! See the next section for how this works.

Class Rule: One Prompt, Two Outputs

For this class, we use a simplified workflow:

Write ONE strong prompt

Use it to generate:

A still image

A short video

Why We Do This:

Benefit	How It Helps
✓ Reduces confusion	One prompt instead of two
✓ Keeps characters consistent	Same description for both
✓ Easier to compare	See what AI adds to video

Benefit	How It Helps
✅ Learn AI behavior	Understand how AI adds motion on its own

How the "Shared Prompt" Works

Write your prompt like a detailed scene description, **NOT** a camera script.

Shared Prompt Template:

[Character description] +
 [Emotion or mood] +
 [Environment] +
 [Time / weather / lighting] +
 [Visual style]

Example (Shared Prompt):

A small blue robot with glowing yellow eyes,
 looking scared and alone,
 in a dark forest at night with rain falling,
 soft blue lighting and mist in the air,
 children's animation style, cinematic.

What happens:

- 🖼️ **Image:** AI picks a single moment from your description
- 🎬 **Video:** AI animates the same scene naturally (adds motion automatically)

🎥 **Veo 3.1 automatically handles:** Camera movement, natural motion, timing, and animation. You just describe the scene!

📌 **Important:** The video model will automatically add motion, camera movement, and animate the scene. You don't need to specify these!

❌ What NOT to Do

Keep it simple! Don't:

Don't Do	Why
❌ Over-direct the camera	"camera zooms in slowly" - AI will do this
❌ Add too many actions	Keep it to one main action or emotion
❌ Worry about timing	AI handles duration

Don't Do**Why**

✗ Rewrite the prompt for video Same prompt works for both!

Good (Shared) Prompt:

A friendly blue robot waving hello in a bright classroom, cheerful atmosphere, cartoon style.

✓ Works for both image AND video!

Too Complicated (Don't do this):

A robot slowly walks forward for 3 seconds, then turns head left,
camera follows from behind and zooms in on face...

✗ Over-directed, confusing!

 Now Learn the Skills!**Basic Prompting: How to Convert a Scene to a Prompt**

Step 1: Start with your scene description (WHO, WHERE, WHAT, MOOD)

Step 2: Expand each element:

Element	Scene Note	Expanded for Prompt
WHO	Spark	"A small blue robot with big round glowing yellow eyes"
WHERE	Dark forest	"in a dark forest at night, tall trees, rain falling"
WHAT	Scared	"standing alone, looking scared and confused"
MOOD	Sad	"moody lighting, blue tones, lonely atmosphere"

Step 3: Add art style (cartoon, realistic, anime, etc.)

Step 4: Add "16:9 aspect ratio" for YouTube

Step 5: Combine into complete prompt!

Prompt Templates**Template 1: Simple (Quick & Easy)**

[Character], [action/pose], in [location], [style]

Example: A blue robot, waving, in a classroom, cartoon style

Template 2: Standard (Recommended)

[Character description].
[What they are doing] in [location].
[Mood/atmosphere], [art style], 16:9 aspect ratio.

Template 3: Detailed (Best Results)

[Full character memory pack].
[Scene setup: action + location + environment details].
[Lighting + mood + atmosphere].
[Art style + quality + aspect ratio].

Advanced: Prompt Memory Pack

Problem: Typing the same character description in every prompt is:

- Tedious
- Error-prone (might describe differently)
- Causes inconsistent characters

Solution: Create a **Memory Pack** - save once, copy-paste everywhere!

How to use:

1. Write character description ONCE
2. Copy-paste at the START of every prompt
3. Each scene just adds the NEW stuff (location, action, mood)

Without Memory Pack:

Scene 1: "A blue robot in forest..."
Scene 2: "Small robot meets girl..." ← Different!
Scene 3: "My robot friend..." ← No details!

✗ 3 different robots!

With Memory Pack:

Scene 1: [Memory Pack] + "standing in forest, scared"
Scene 2: [Memory Pack] + "meeting Luna, hopeful"
Scene 3: [Memory Pack] + "with family, happy"

✅ Same Spark every time!

★ Golden Example: See Before You Do!

Before creating your own prompts, study this complete example of 'Spark the Lost Robot':

Step 1: Create a Character Memory Pack

Why? You will use this same description in EVERY scene prompt!

Spark Memory Pack:

A small blue robot named Spark, about the size of a cat, with big round glowing yellow eyes, a cute friendly smile, one silver antenna on top, shiny metallic body, children's book illustration style

Luna Memory Pack (secondary character):

A kind young girl named Luna, about 8 years old, brown hair in pigtails, wearing a bright red raincoat, gentle smile, warm expression

Step 2: Scene Descriptions (from Part 2)

Scene	WHO	WHERE	WHAT	MOOD
1	Spark	Dark forest, night	Scared, alone	Sad, lonely
2	Spark + Luna	Forest path	Luna helps Spark	Hopeful
3	Spark + Luna + Family	Robot village	Reunion	Happy

Step 3: Complete Image Prompts

Formula: [Memory Pack] + [Scene Details] + [Mood + Style + Aspect Ratio]

Scene 1: Lost in the Storm

Scene Description: WHO: Spark | WHERE: Dark forest | WHAT: Scared | MOOD: Sad

✅ **Complete Image Prompt:**

A small blue robot named Spark, about the size of a cat, with big round glowing yellow eyes, a cute friendly smile, one silver antenna on top, shiny metallic body.

Spark is standing alone in a dark forest at night. Rain is falling heavily. Tall dark trees surround the robot. Spark looks scared and confused, looking up at the stormy sky.

Children's book illustration style, moody blue and purple lighting, raindrops visible, sad lonely atmosphere, 16:9 aspect ratio.

Scene 2: A Friendly Face

Scene Description: WHO: Spark + Luna | WHERE: Forest path | WHAT: Meeting | MOOD: Hopeful

✅ Complete Image Prompt:

A small blue robot named Spark, about the size of a cat, with big round glowing yellow eyes, shiny metallic body.

A kind young girl named Luna, brown hair in pigtails, wearing a bright red raincoat, kneeling on a forest path, reaching her hand out to Spark with a gentle smile.

Spark looks up at Luna with hopeful eyes. The rain is stopping, golden sunlight breaking through clouds.

Children's book illustration style, warm hopeful lighting, green forest background, 16:9 aspect ratio.

Scene 3: Home at Last

Scene Description: WHO: Spark + Luna + Family | WHERE: Village | WHAT: Reunion | MOOD: Happy

✅ Complete Image Prompt:

A small blue robot named Spark, about the size of a cat, with big round glowing yellow eyes, shiny metallic body.

Spark is hugging a larger blue robot (mother) and a medium blue robot (sibling) in a colorful robot village with dome-shaped houses.

Luna, a young girl in a red raincoat with brown pigtails,

waves goodbye with a big cheerful smile.

Sunny day, bright cheerful colors, rainbow in the sky, children's book illustration style, joyful happy ending, 16:9 aspect ratio.

What Makes This Example Work?

Technique	How It Helps
Same Memory Pack in every prompt	Spark looks consistent across all scenes
Scene-specific details	Each scene has unique setting and mood
Mood words	"sad lonely" vs "warm hopeful" vs "joyful"
Art style repeated	"children's book illustration style" every time
16:9 aspect ratio	Ready for YouTube video

Style Words Library

Art Styles:

- cartoon, anime, realistic, watercolor, children's book illustration
- Pixar style, Studio Ghibli style, digital art, 3D render

Lighting & Mood:

- bright cheerful, dark moody, warm golden, cool blue
- cinematic lighting, soft lighting, dramatic shadows

Quality Boosters:

- highly detailed, beautiful, professional, 4K
-

Tool-Specific Tips

Tool	Tips
Gemini	Conversational style works well. Say "Create an image of..."
ChatGPT/DALL-E	Handles complex prompts. Can ask for modifications.
Copilot	Clear, simple prompts work best.
All tools	Put important details FIRST! Add "16:9 aspect ratio" for video.

✓ Part 3 Complete!

You now understand:

- The Pro Workflow (where prompts fit in)
- Scene Description vs. AI Prompt
- Image Prompt vs. Video Prompt differences
- How to create prompts from scene descriptions
- The Memory Pack technique for consistency

Next: Create your images in Part 4!

PART 4: Create Images & Video Clips
{#create-images}

Now it's time to create your story assets: **images** and **short video clips**!

 Basic Image Knowledge

Before creating images, understand these basics:

Image File Formats

Format	Best For	Notes
PNG	AI-generated images	✓ Recommended! High quality, supports transparency
JPG/JPEG	Photos	Smaller file size, but loses some quality
WebP	Web images	Modern format, good quality + small size

💡 **Tip:** Always save AI images as **PNG** for best quality!

Image Resolution (Size)

Resolution	What It Means	Use Case
1920 x 1080	Widescreen (16:9), HD	✓ Best for YouTube videos!
1024 x 1024	Square (1:1)	Good for social media, profiles
512 x 512	Square, lower quality	Faster generation, less detail

Resolution = Width × Height in pixels

📌 **Why this matters:** Higher resolution = more detail, but takes longer to generate.

Aspect Ratio

Ratio	Shape	Good For
16:9	Wide rectangle	✅ YouTube, video backgrounds - USE THIS!
1:1	Square	Social media, profile pictures
9:16	Tall rectangle	Phone wallpapers, TikTok, Reels

💡 **Tip:** For your YouTube video, use **16:9 (widescreen)** at **1920x1080** resolution!

Framing / Distance

Control how much of your character is visible:

Framing	What It Means	When to Use
Full body	Entire character head to toe	Action scenes, showing character in environment
Medium shot	Waist up	Conversations, interactions
Close-up	Face/head	Emotions, expressions
Wide shot	Character + lots of environment	Establishing scenes, showing location

💡 **Tip:** Add words like "full body shot" or "wide shot" to your prompt to avoid unexpected crops or tiny characters!

🔗 AI Image Tools

👉 **Teacher recommendation:** Use **Gemini** or **ChatGPT** unless told otherwise.

Choose **ONE** of these tools to create your images:

Option 1: Google Gemini (Images + Videos) ★
Recommended!

👉 [Open Gemini](#)

For Images:

1. Open Gemini in your browser
2. Type: "Create an image of [paste your prompt]"
3. Wait 10-30 seconds
4. Save as PNG to `my_ai_story/images/`

For Videos (Veo 3.1):

1. In Gemini, ask for video generation with Veo
2. Upload your image OR enter text prompt
3. Wait 1-3 minutes
4. Download MP4 to `my_ai_story/videos/`

Pros: Free for images AND videos, Veo 3.1 integrated, easy to use, great for beginners

⚠️ **Video Limit:** Gemini allows **3 free videos per day**. Use them wisely!

💡 **Tip:** Generate all your images first, THEN create 3 videos for your best scenes.

Option 2: ChatGPT with DALL·E 🌟

👉 [Open ChatGPT](#)

How to use:

1. Open ChatGPT (requires account)
2. Type: "Create an image of [paste your prompt]"
3. Wait 10-30 seconds
4. Click download button on the image

Pros: Very high quality, understands complex prompts **Note:** Free tier has limited image generations per day

Option 3: SellingPilot (by Newegg)

👉 [Open SellingPilot](#)

How to use:

1. Open SellingPilot in your browser
2. Navigate to the Image Tool
3. Enter your prompt
4. Generate and download your image

Pros:

-  **Unlimited generations for training!**
-  Developed by Newegg
-  Easy interface
-  Images only (no video)

Tool Comparison

Tool	Free?	Quality	Speed	Ease
Gemini (+ Veo)	 Yes	★★★★★	Fast/Medium	Very Easy
ChatGPT/DALL·E	Limited	★★★★★	Medium	Easy
SellingPilot	 Unlimited*	★★★★★	Fast	Very Easy

*SellingPilot is unlimited for this Newegg AI training class!

 **Recommendation:** Start with **Gemini** - does both images AND videos, free and easy!

 Set Up Your Folders First!

Create this folder structure on your computer:

```
my_ai_story/  
├── images/      ← Your AI-generated images go here!  
├── videos/      ← For Class 3  
└── music/       ← For bonus music (optional)
```

 Image Creation Workflow

For each scene, follow these steps:

FROM SCENE DESCRIPTION → TO AI IMAGE

1. LOOK at your Scene Description (from Part 2)
→ WHO, WHERE, WHAT, MOOD

2. BUILD your Prompt (using Part 3 knowledge)
 - Start with Memory Block (character description)
 - Add scene details
 - Add style + mood
3. PASTE into AI tool
 - "Create an image of [your prompt]"
4. CHECK the result
 - Does character look right?
 - Is setting/mood correct?
5. SAVE as scene_X.png

Create Your Images!

Important Rule: Write First, Generate Later

Before using ANY AI tool:

-  Write your scene prompts first

Why this matters:

- Ensures you think through ALL scenes before creating
- Helps maintain character consistency across prompts
- Prevents wasting time regenerating inconsistent images

Scene 1 Image

Step 1: Review your Scene 1 Description (from Part 2):

Question	Your Answer (from Part 2)
 WHO	
 WHERE	
 WHAT	
 MOOD	

Step 2: Build your Prompt:

[Paste your Character Memory Pack first]

> 💡 ****Memory Pack = Memory Block**** (same thing you learned in Part 3!)

[Add: What's happening + Where]

[Add: Style + Mood + "16:9 aspect ratio"]

Step 3: Generate in AI tool!**Step 4: Check result:**

Check	Question
☐	Does my character look like my description?
☐	Is the setting/location correct?
☐	Is the mood/lighting what I wanted?
☐	Is it 16:9 widescreen for YouTube?

Step 5: Save as: scene_01.png**Scene 02 Image**

⚠️ **Consistency Check:** Compare with Scene 1 before saving. Same character description?

Repeat the same steps as Scene 1:

1. Review your Scene 02 description from Part 2
2. Build your prompt (Memory Pack + Scene details + Style)
3. Generate in your chosen AI tool
4. Check result

5. Save as `scene_02.png`

Scene 03 Image

 **Consistency Check:** Compare with Scenes 1 & 2 before saving. Same character?

Repeat the same steps as Scene 1:

1. Review your Scene 03 description from Part 2
2. Build your prompt (Memory Pack + Scene details + Style)
3. Generate in your chosen AI tool
4. Check result
5. Save as `scene_03.png`

Scene 4 Image (Optional)

Build prompt → Generate → Check → Save as: `scene_04.png`

Scene 5 Image (Optional)

Build prompt → Generate → Check → Save as: `scene_05.png`

Verify Your Files

Your folder should now look like:

```
my_ai_story/
├── images/
│   ├── scene_01.png ✓
│   ├── scene_02.png ✓
│   ├── scene_03.png ✓
│   ├── (scene_04.png)
│   └── (scene_05.png)
```

Troubleshooting

Problem	Solution
Character looks different	Use EXACT same Memory Block in every prompt
Wrong aspect ratio	Add "16:9 aspect ratio" or "widescreen" to prompt
Too dark/bright	Add lighting words: "bright lighting" or "soft lighting"

Problem	Solution
AI ignores details	Put important details at BEGINNING of prompt
Text looks wrong	Add text in Canva later, not in AI

Image Creation Checklist

Check	Item
☐	Scene 1 image created and saved
☐	Scene 2 image created and saved
☐	Scene 3 image created and saved
☐	(Optional) Scene 4 image
☐	(Optional) Scene 5 image
☐	All images are 16:9 widescreen
☐	Character looks CONSISTENT across all images
☐	All files saved in <code>my_ai_story/images/</code>

Total images created: ____

PART 4B: Create Video Clips (2-3 Scenes)

Select your 2-3 BEST scenes and create video clips using text-to-video!

 **Goal:** Pick 2-3 scenes with the most action/emotion for video

 **Remember:** Gemini allows 3 free videos per day - use them wisely!

Why Only 2-3 Scenes?

Reason	Why It Matters
3 video limit	Gemini gives you 3 free videos/day
Quality over quantity	Better to perfect a few than rush all
Learning focus	Understand how text-to-video works
Time management	Videos take 1-3 minutes each to generate

Using Gemini for Text-to-Video

Steps:

1. Open [Gemini](#)
2. Tell Gemini: "Create a video using Veo 3.1"
3. **Paste your scene prompt** (the same one you used for images!)
4. Wait 1-3 minutes for generation
5. Download MP4 to `my_ai_story/videos/`

💡 **Tip:** Use the EXACT SAME prompt you used for images. Veo will automatically add motion!

Select & Create Your Video Clips

Step 1: Choose Your 2-3 Best Scenes

Which scenes have the most:

- ☒ Action or movement
- ☒ Emotion or drama
- ☒ Visual interest

Write your choices:

Priority	Scene Number	Why this scene?
1st	Scene ____	
2nd	Scene ____	
3rd	Scene ____ (optional)	

Step 2: Generate Your Videos

For each scene you selected, use the prompt from Part 4A.

Video Clips Checklist

Check	Item	Status
☐	Selected 2-3 best scenes	
☐	Generated video clip 1	Saved as: _____
☐	Generated video clip 2	Saved as: _____
☐	Generated video clip 3 (optional)	Saved as: _____
☐	All videos saved in <code>my_ai_story/videos/</code>	

Troubleshooting Video Generation

Problem	Solution
Character looks different	Use your exact character description from image prompt
Too much weird motion	Simplify your prompt - less action words
Generation failed	Try again or try a different scene
Hit daily limit	Come back tomorrow or focus on images for now

Your Complete Asset Folder

After Part 4, your folder should look like:

```

my_ai_story/
├── images/
│   ├── scene_01.png ✓
│   ├── scene_02.png ✓
│   ├── scene_03.png ✓
│   └── (etc...)
├── videos/
│   ├── scene_01_clip.mp4 ✓ (optional)
│   ├── scene_02_clip.mp4 ✓ (if selected)
│   └── scene_03_clip.mp4 ✓ (if selected)
└── music/
    └── (optional background music)
  
```

You need:

- ✓ ALL scene images (required)
- ✓ 2-3 video clips (recommended)

These assets are ready for Class 3!

BONUS: AI Music Generation {#bonus-music}

OPTIONAL - For students who finish early or want custom music!

If you've completed your images and have extra time, you can create custom background music for your story!

Important Rules for Music

Before you start:

Rule	Why
⚠️ Instrumental only (no lyrics)	Lyrics distract from narration and can cause copyright issues
💡 MP3 format	Small file size, works everywhere
💡 60–90 seconds	Perfect length for most student stories

What is AI Music Generation?

AI can compose original music based on your descriptions!

What it can do:

- Create custom background music
- Match the mood of your story
- Generate royalty-free soundtracks
- Save time vs. searching for the "perfect" track

Example:

- Describe: "Cheerful, upbeat music for a kids robot story"
- AI creates: A 60-90 second happy track!

Recommended AI Music Tools

Option A: Suno AI 🌟 Best for beginners!

👉 [Try Suno](#)

How it works:

1. Sign up for free account
2. Describe the mood you want
 - Example: "Cheerful instrumental music for a kids story (no lyrics)"
 - Example: "Gentle instrumental background music (no lyrics)"
 - Example: "Exciting instrumental adventure music (no lyrics)"
3. Suno creates a track (usually 60-90 seconds)
4. Download and save!

Free Tier: Limited songs per day (usually 5-10)

Option B: Soundraw

👉 [Try Soundraw](#)

How it works:

1. Choose settings:
 - **Mood:** Happy, Epic, Calm, Inspiring, etc.
 - **Genre:** Pop, Cinematic, Electronic, etc.
 - **Length:** Match your video length!
2. AI generates music based on your choices
3. Preview and download

Free Tier: Can generate and preview

Option C: AIVA

👉 [Try AIVA](#)

How it works:

1. Choose emotional tone and style
2. AIVA composes original music
3. Download for your project

Free Tier: Personal use with AIVA credit

🎵 Create Your Story Music!

Step-by-Step:

Step 1: Plan Your Music

Think about your story mood:

What mood matches my story?

- ☐ Happy & cheerful
- ☐ Calm & peaceful
- ☐ Exciting & adventurous
- ☐ Mysterious
- ☐ Inspiring
- ☐ Other: _____

How long should it be?

My story will be about ____ seconds long
So I need music that's about ____ seconds

Step 2: Describe Your Music

Write a description for the AI:

Example prompts:

- "Happy, upbeat background music for a kids story about a friendly robot"
- "Calm, gentle music for a peaceful story"
- "Exciting, adventurous music with energy"
- "Inspiring, hopeful music for a success story"

My music description:

[Write your music prompt here]

Step 3: Generate Music

1. Choose one of the tools above (Suno recommended!)
 2. Enter your description
 3. Generate the music
 4. Listen to it - does it match your story?
 5. Regenerate if needed!
-

Step 4: Download and Save

1. Download your AI-generated music
2. Save it in your `my_ai_story` folder
3. Create a new subfolder if needed: `my_ai_story/music/`
4.  **Save as:** `background_music.mp3` or similar

File saved: ☐ Yes! Ready for Class 3

Music Tips

DO:

- Keep it simple - one background track is enough
- Match music mood to story mood
- Make sure it's not too long (1-2 minutes max)
- Save it clearly named

❌ DON'T:

- Create multiple competing tracks
 - Make music that clashes with your story mood
 - Forget to save/download it!
 - Stress about finding "perfect" music
-

🎯 Using Music in Class 3

Next class, you'll:

1. Upload your music to Canva
 2. Add it as background to your video
 3. **Lower the volume to 20-30%** so voices are clear!
 4. Your story will have a professional soundtrack!
-

✅ Music Creation Checklist

If you try this bonus:

- ☐ Chose a music generation tool
- ☐ Described the mood I want
- ☐ Generated background music
- ☐ Downloaded and saved the file
- ☐ File is in `my_ai_story/music/` folder
- ☐ Ready to use in Class 3!

Music file name:

🌟 Remember

This is **OPTIONAL**!

- Only do this if you finish images early
- Only do this if you're interested in music
- Your story is complete **WITHOUT** custom music
- Canva has good built-in music too!

What you learn:

- AI can create original music
- How to describe music to AI

- Matching audio to visual content
 - Enhancing stories with sound
-

Great job! If you created music, you'll have one more awesome asset for Class 3!

PART 5: Preview - What's Next! 🎬 {#preview}

🌟 Amazing Work!

You've completed the planning and image creation phase!

What you accomplished today:

- ✅ Planned your complete story
 - ✅ Created detailed storyboard
 - ✅ Learned AI image generation
 - ✅ Created 3-5 images for YOUR story
 - ✅ Organized everything in folders
-

🎬 Preview: Class 3

Next session, you'll learn:

Part 1: AI Video Animation 🎬

- How to make your images move!
- Using Runway ML to animate scenes
- Creating 2-3 animated clips

Part 2: Assemble in Canva 🎨\n

- Combine all your assets in one place!\n
- Add AI voices using Canva's built-in text-to-speech\n
- Use your music (if you created it!)\n
- Using Canva to put it all together
- Adding transitions and polish

Part 4: Showcase! 🎉

- Presenting your story to the class
- Celebration and reflection

FINAL CHECK: Am I Done?

You are ready for Class 3 if you can check ALL boxes:

Required Deliverable	Status
☐ Story Outline complete (Beginning, Middle, End)	
☐ Scene Planning Table filled (3-5 scenes)	
☐ Image for Scene 1 created and saved	
☐ Image for Scene 2 created and saved	
☐ Image for Scene 3 created and saved	
☐ (If applicable) Image for Scene 4 created and saved	
☐ (If applicable) Image for Scene 5 created and saved	
☐ All files saved in <code>my_ai_story/images/</code> folder	

If any box is unchecked, go back and complete it before leaving!

IMPORTANT: Before You Leave

Make sure:

- ☐ All images are saved in `my_ai_story/images/` folder
- ☐ You have your storyboard (this notebook or printed)
- ☐ You know where your files are saved
- ☐ You bring everything to Class 3!
- ☐ (Optional) Background music file saved in `my_ai_story/music/` \n

Bring to Class 3:

- Your computer with all saved images
- Your storyboard
- Your music file (if you created one)\n
- Your creativity and excitement! 🚀

Quick Reflection

1. What's your favorite image you created today?

[Which scene and why?]

2. What was the hardest part about writing prompts?

[Your experience]

3. What are you most excited about for Class 3?

[Looking forward to...]

Congratulations!

You've completed Class 2: Plan Your Story & Create with AI!

You now know how to:

- 📖 Plan a complete story structure
- 🎨 Create detailed storyboards
- ✍️ Write effective AI prompts
- 🖼️ Generate AI images for your vision

Next class: Bring your images to life with video, voice, and final assembly!

See you in Class 3! 🚀 ✨

💡 **Tip for Parents/Teachers:**

- Help students backup their images to cloud storage
- Print or save their storyboards
- Remind them to bring files to Class 3
- If students want, they can create more images at home!
